

Sigsync

Secure. Centralized.
Email Signature for Office 365
And Exchange users.

Email Signature Overview

Centralized, Web-based

Sigsync is a centralized web-based signature management service that allows you to create and manage your email signature.

Platform Independent

No matter from which device you want to access emails, Sigsync supports email signature across all the devices and email clients.

Brand your email

Email signature includes company branding with all emails before leaving your company.

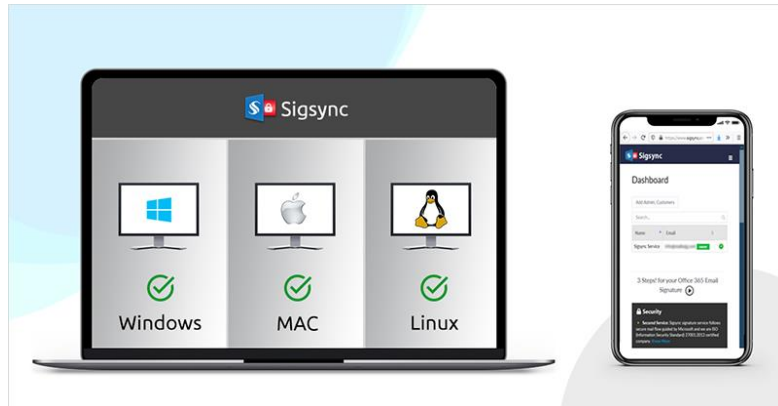

Highly Secure and Reliable

Sigsync is a secure cloud service and a perfect Office 365 email signature manager to add custom email signature.

Email Disclaimers

Professional Office 365 email signature helps you to incorporate an email disclaimer laws and regulations.

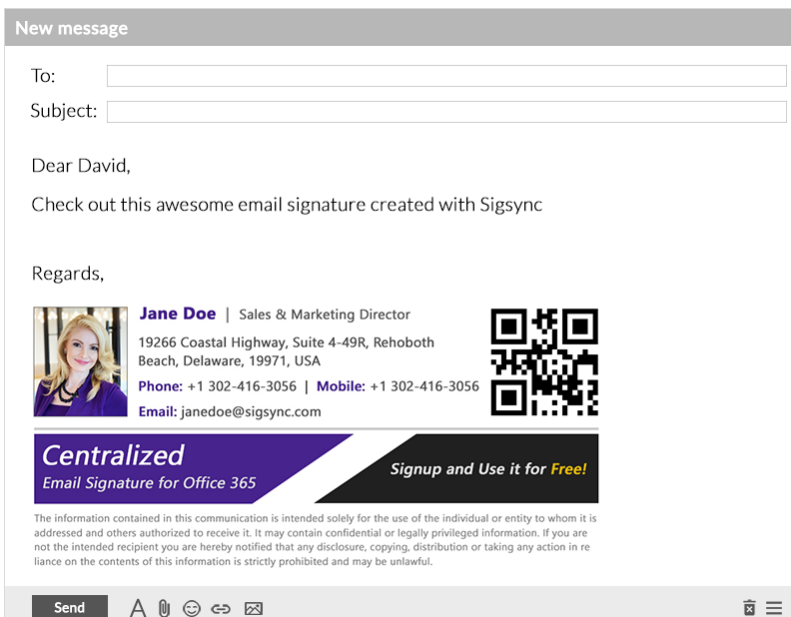

What is Sigsync Email Signature?

Sigsync is a centralized, web-based, secured email signature service which makes the email signature creation and maintenance easier. With the centrally managed dashboard, it ensures compliance and personalized sign-off messages are automatically appended to the end of an email on fly, without any dependency of the platform/device from which you are sending email.

Sigsync supports Microsoft Office 365 and Microsoft Exchange email signature. Within a few clicks, you can create company-wide signature automatically. It follows high security standards and compliance to ensure your data is safe and secure. Sigsync is ISO 27001:2013 certified service and ensures that the complete email signature process is secured.

Sigsync uses secure cloud services for email signatures and disclaimers as per the flow instructed by Microsoft. Your emails are not stored or read by anyone. Your Office 365 credentials are not stored and safe guarded by the OAuth 2.0 and TLS encryption during configurations / authentication.

Automatic Configuration

Exchange Online connectors on Office 365 will be configured automatically through Sigsync connectors configuration wizard.

Outlook Add-In Preview

Signature that will be added after sending email can be previewed before sending the email by using Sigsync Outlook Add-In.

Sent item Email Signature

Signature for sent emails are updated instantly after adding signature. This allows you to view the signature added along with your emails.

Social media integration

Allows to add multiple social media icons that lets you organize your communication channels with minimum effort.

OneClick survey

Have a survey for your customers and obtain customer satisfaction details instantly though signature.

How does Sigsync work?

Sigsync is a cloud-based server-side Office 365 email signature service that processes emails and adds signatures, disclaimers, etc. based on rules defined by user. This is done by using secure TLS connection with Microsoft servers in Office 365. It is easy to add signatures to tenants and configure, which creates connectors and rules in user exchange environment to reroute all emails that require signature through Sigsync service and sent to recipients from Office 365.

- A user sends an email from Office 365 account.
- Microsoft Office 365 Exchange rules 'Sigsync Routing rules' are applied on the email to be sent. If the rule matches, Office 365 forwards the email to Sigsync server using 'Sigsync Outbound Connector' through secure TLS connection.
- Now, the incoming email is accepted by Sigsync server and processed based on signature rules created by user. Signature is added to email if applicable.
- Email is returned back to Office 365 after processing using secure TLS connection through 'Sigsync Inbound Connectors'.
- Office 365 sends the email which is processed by Sigsync service to recipient.

Make Admin

Assign all the signature management to your marketing team by making admin using the 'Make Admin' feature.

Automatically retrieve AD fields

Signature templates uses AD fields that will insert sender's AD field value in signature placeholder. Thus, information such as Name, Company, Address details etc. are added dynamically in your email signature.

Multiple geolocation servers

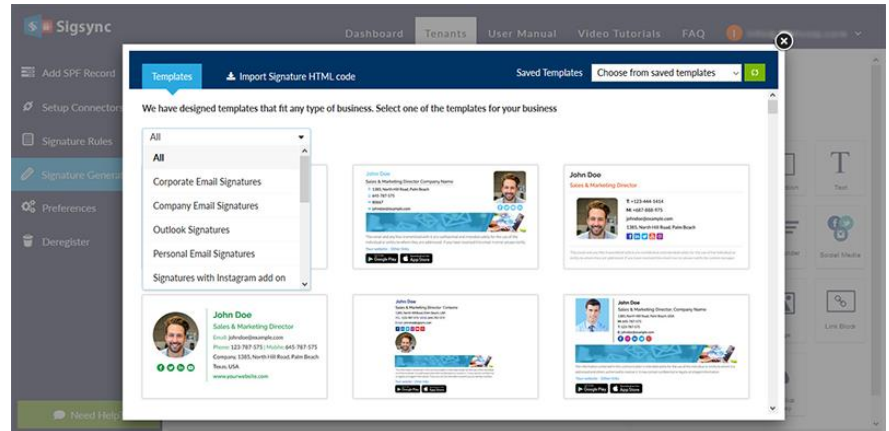

Helps you to minimize the latency by selecting servers near to your region. Having servers based in your region reduces latency as well as makes it GDPR compliant.

Different signature for different campaigns

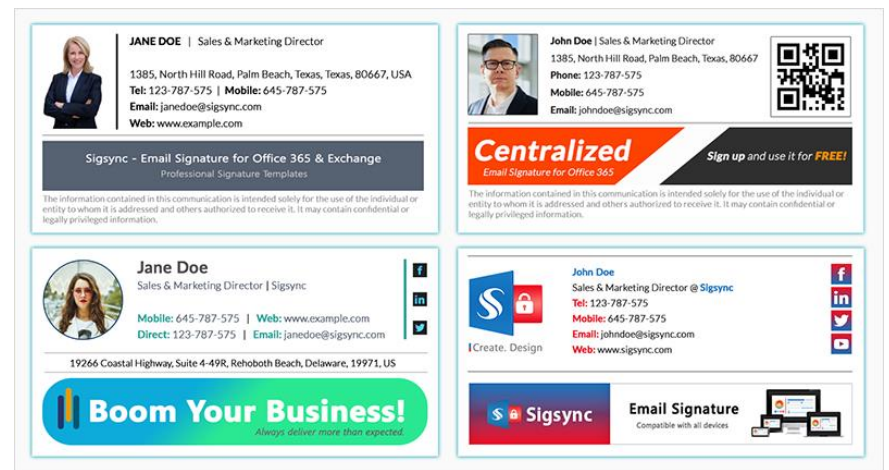

Have multiple signatures application for different audiences based on rules. Send different signatures for different products or campaign or based on keywords for different countries using multiple signature rules.

Sigsync Email Signature Generator

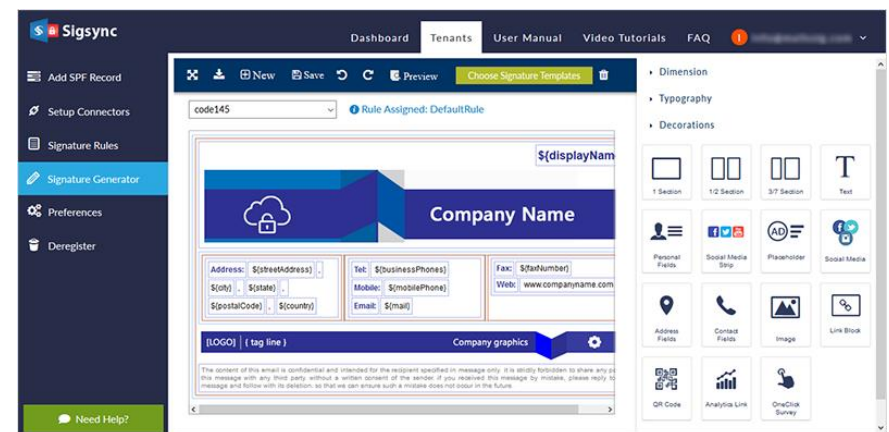

Predefined signature templates for your business needs.

There are various professional signature template layouts are available for your business needs. All the templates are fully customizable.

Design signatures using flexible signature generator

Create professional HTML signature without any technical background using Sigsync signature generator. It is a WYSIWYG Signature generator and automatically handles all the HTML while you place design components such as Section, Text, Social media etc., for your signature.

Our user reviews

Very good Dashboard and the interface is just an Amazing! Simple and featured Signature editor makes my day. All I can say is its an amazing email signature service for small and medium sized businesses.

- **Jameal Thompson**
NewYork, United States

You won't find a better overall email signature service than the full-featured Sigsync, especially for the price (free-of-cost).

- **Mitchelle D**
Netherland

Always avoided sending an email from my iPhone / iPad until I was on a desktop PC / Macbook due to not having professional looking email which needs a HTML signature to send to my new / existing customers. Since I started using Sigsync Office 365 email signature, I no longer have this problem. Thanks Guys!
